

SERVICE PROPOSAL

Digital Impersonation, Image Misuse & Online Harm Response

A results-based 30-day intervention to protect the Minister, the Ministry and members of the public from fraudulent profiles and employment scams.

Prepared for
The Honourable Pearnel Charles Jr., MP
Minister of Labour and Social Security
The Ministry of Labour and Social Security

26 August 2026

A coordinated response to a recurring digital threat

Data and Cybersecurity Limited (DCS) proposes an urgent, coordinated response to the unauthorized use of the Minister's image, voice and official footage in social-media content promoting purported overseas employment and Canadian work-permit opportunities.

The evidence indicates a recurring campaign - not a single isolated post. Multiple TikTok identities have used related Ministry-facing content, the same contact number has appeared across posts, and at least one member of the public sought confirmation after being approached.

30

DAYS OF COORDINATED
RESPONSE

DCS will move the Ministry from isolated reporting of fake profiles to a documented, coordinated and repeatable response system.

Immediate protection

Identify harmful content, preserve evidence and pursue compliant platform action while the material remains active.

Institutional resilience

Leave the Ministry with an operating framework, evidence register, communications package and monitoring roadmap.

The problem requiring intervention

Observed threat pattern

Official-looking footage and public-official likenesses are being reused.

Viewers are directed to unofficial numbers and employment offers.

The content exploits trust in the Minister, MLSS and legitimate overseas-employment programmes.

Removed accounts can be renamed, replaced or recreated.

Potential harm

Financial loss through fraudulent fees and payment requests.

Identity theft and misuse of personal information.

Reputational harm and public confusion about official channels.

Loss of confidence in legitimate government programmes.

Engagement objectives

Objective	Result sought
Identify	Determine the known and reasonably discoverable footprint of the campaign.
Preserve	Secure reliable evidence before profiles, posts, messages or assets are changed or deleted.
Disrupt	Support swift reporting, takedown and escalation using the strongest available grounds.
Protect	Reduce the likelihood that the public mistakes fraudulent profiles for official channels.
Institutionalize	Create a repeatable Ministry response process for future impersonation and employment-scam incidents.

03
INTEGRATED SERVICE ARCHITECTURE

Six connected services. One controlled response.

The services operate on a rolling basis so that new discoveries can immediately inform evidence preservation, platform action, public warnings and referrals.

01

Incident mobilisation and authority mapping

Decision rights, official channels, content ownership and escalation routes.

J\$225,000 excl. GCT

02

Cross-platform discovery scan

Search names, numbers, images, videos and scam language across priority environments.

J\$610,000 excl. GCT

03

Evidence preservation and campaign mapping

Create defensible incident files and connect recurring indicators.

J\$380,000 excl. GCT

04

Platform reporting and escalation

Prepare evidence-led submissions and pursue eligible follow-up routes.

J\$505,000 excl. GCT

05

Public-protection communications

Build the warning, channel guide, FAQ and victim-reporting workflow.

J\$235,000 excl. GCT

06

Referral, reporting and transition

Prepare supported referrals and transfer a repeatable operating model.

J\$305,869.57 excl. GCT

J\$2.6 MILLION

TOTAL INVESTMENT INCLUDING GCT
Fixed 30-day engagement | Results-based delivery

Mobilise the response and discover the threat footprint

4.1 Incident mobilisation and authority mapping

J\$225,000 excl. GCT

Purpose. Convert scattered reports and informal notifications into a controlled response programme with clear authority, priorities and decision channels.

DCS ACTIONS

- Conduct an urgent mobilisation meeting with the designated Ministry focal point and relevant communications, legal, security and programme representatives.
- Review known accounts, posts, telephone numbers, messages and victim reports; classify immediate risks.
- Confirm official channels, programme information, content ownership and authorized approvers.
- Create the initial indicator set covering names, photographs, videos, programme names, usernames, numbers and scam phrases.
- Establish the incident-intake, approval, reporting and escalation process.

Client value: Clear authority and ownership reduce inconsistent reporting and platform delays.
Outputs: Mobilisation note, identity baseline, authority matrix, priority list, escalation contacts and intake procedure.

4.2 Cross-platform impersonation and image-misuse discovery scan

J\$610,000 excl. GCT

Purpose. Determine whether the known TikTok activity is part of a wider campaign and locate misuse of the Minister's name, image, voice, videos, Ministry branding or programme credibility.

DCS ACTIONS

- Search TikTok, Facebook, Instagram, YouTube, X, LinkedIn and the indexed web.
- Run name, username, phrase and telephone-number searches using known and newly discovered indicators.
- Use reverse-image analysis and distinctive video-frame searches to find copied, cropped or edited official material.
- Search overseas-employment, farm-work, work-permit, recruitment-fee and unofficial-agent themes.
- Separate legitimate reporting and commentary from deceptive impersonation, unauthorized commercial use and suspected fraud.
- Risk-rate validated results by reach, deception, victim exposure, payment solicitation and replacement likelihood.

Client value: The Ministry sees the campaign's discoverable footprint rather than only the accounts already reported.
Outputs: Findings register, validated account list, media-reuse findings, expanded indicators and priority action queue.

Preserve evidence and pursue platform action

4.3 Evidence preservation, incident register and campaign mapping

J\$380,000 excl. GCT

Purpose. Preserve reliable records before harmful content is edited, renamed or deleted and show how profiles, numbers, posts and messages may be connected.

DCS ACTIONS

- Capture account identifiers, URLs, post links, captions, claims, engagement, dates, numbers, payment instructions and visual material.
- Preserve screenshots, screen recordings and relevant frames with source and collection details.
- Maintain a controlled incident register showing validation, risk, evidence location, actions, responses and next steps.
- Map recurring footage, telephone numbers, language, linked pages and replacement accounts.
- Separate confirmed facts from investigative leads and avoid unsupported attribution.

Client value: Fragile online evidence becomes an organized institutional record that supports platforms and competent authorities.

Outputs: Evidence files, incident register, relationship map, action log and evidence index.

4.4 Platform reporting, takedown support and escalation

J\$505,000 excl. GCT

Purpose. Pursue removal, restriction or other platform action using the strongest grounds supported by the facts and rights held by the Minister or Ministry.

DCS ACTIONS

- Select the appropriate reporting basis: impersonation, fraud, privacy or likeness misuse, copyright and, where available, trademark infringement.
- Prepare and submit evidence-led reports against accounts, posts, copied videos and related content.
- Prioritize high-reach and high-harm incidents while discovery continues.
- Track acknowledgements, reviews, restrictions, rejections and removals; use eligible follow-up and appeal channels.
- Document unsuccessful actions and recommend revised complaints, public warnings, legal notices or referrals.

Client value: Centralized, rights-based submissions create credibility and accountability.

Outputs: Completed submissions, evidence packs, response tracker, outcome verification and unresolved-incident recommendations.

Protect the public and strengthen institutional readiness

4.5 Public-protection communications and victim-reporting system

J\$235,000 excl. GCT

Purpose. Reduce victim exposure while platform action is pending and help the public distinguish official channels from fraudulent employment agents.

DCS ACTIONS

- Draft a public advisory explaining the scam pattern and warning against payments or disclosure to unofficial agents.
- Prepare a verified-channel notice and red-flag guide for work-permit offers, unofficial numbers and fee requests.
- Develop a frequently asked questions document and response templates for communications staff.
- Design a victim-reporting workflow specifying the evidence and consent needed for triage and referral.
- Coordinate warning timing with containment and referral activity.

Client value: Clear official communication interrupts the scam's social-engineering advantage.

Outputs: Public advisory, channel notice, red-flag guide, FAQ, intake protocol and response templates.

4.6 Referral support, final reporting and transition monitoring

J\$305,869.57 excl. GCT

Purpose. Close the intervention with an auditable record, support lawful referrals and leave the Ministry with a repeatable response model.

DCS ACTIONS

- Identify incidents that may warrant referral based on deception, solicitation, victim loss, identity misuse or recurring activity.
- Organize incident chronologies, evidence indexes, known indicators, victim material and action histories.
- Conduct a closing rescan for replacement accounts and unresolved content.
- Prepare the final findings, actions, outcomes, residual risks and control recommendations.
- Deliver an executive briefing and practical monitoring-and-response plan.

Client value: The Ministry receives more than a one-time removal exercise - it gains a documented control framework.

Outputs: Supported referral package, closing rescan, final report, residual-risk register and monitoring roadmap.

Measurable results and service standards

DCS will be accountable for the actions and evidence of completion below. Platform removal, disclosure, prosecution and recovery decisions remain controlled by the relevant platforms and competent authorities.

Client result	DCS commitment	Evidence of completion
Controlled response	Complete mobilisation, authority matrix, official-channel baseline and priority list within three business days after required inputs.	Mobilisation note, matrix and action queue.
Campaign footprint assessed	Complete initial scan by Day 10; refresh through Day 30; review up to 50 candidate items.	Search log, candidate register and risk ratings.
High-risk evidence protected	Preserve critical/high-risk content within one business day of validation; create up to 30 evidence files.	Timestamped files, index and register.
Platform action pursued	Prepare and track up to 25 complaints plus up to 15 eligible follow-up, appeal or escalation actions.	Receipts, tracker, responses and outcome checks.
Public warning ready	Deliver the advisory, channel notice, red flags, FAQ, templates and reporting workflow by Day 12.	Publication-ready materials.
Decision-makers informed	Two updates per week, critical notice within four business hours after validation and three formal briefings.	Reports, alerts and briefing records.
Referral and transition completed	Deliver supported referral material, closing rescan, dashboard, final report and 90-day roadmap by Day 30.	Referral pack, dashboard, report and roadmap.

DCS action plan: first 30 days

Period	DCS actions	Result for the Ministry
Days 1-3	Mobilise the response team, validate authority, collect incidents, confirm official accounts and ownership, and establish evidence, approval and escalation protocols.	One controlled process and an agreed priority list.
Days 2-10	Run platform, web, username, telephone-number, reverse-image and video-frame searches; validate candidates and expand indicators.	An initial campaign-footprint assessment and action queue.
Days 3-20	Preserve evidence, map related indicators, submit prioritized complaints and pursue eligible follow-up, appeal and escalation routes.	Documented action against the highest-risk validated content.
Days 5-12	Draft the advisory, channel notice, scam red flags, FAQ, response templates and victim-intake protocol.	A coordinated public-protection and victim-reporting package.
Days 11-23	Organize chronologies, indicators, victim records and platform actions; brief the Ministry on supported referral options.	Referral-ready evidence packages where supported.
Days 21-30	Check replacement accounts and outcomes, quantify results and residual risks, and deliver the executive briefing and roadmap.	A verified close-out record and next-stage operating plan.

Rolling response: New discoveries will be actioned as they are validated. DCS will not wait until Day 30 to preserve evidence or report urgent content.

Included capacity, response levels and accountability

50	30	25
CANDIDATE REVIEWS	EVIDENCE FILES	INITIAL SUBMISSIONS
Accounts, posts, pages or assets logged and classified.	Validated incidents with source, timestamp, capture, risk and action history.	Completed reports concerning a specific account, post, page or asset.
15	2x	1
ESCALATION ACTIONS	WEEKLY REPORTING	PUBLIC-PROTECTION PACKAGE
Eligible follow-up, appeal or escalation actions.	Written updates plus three formal briefings.	Editable communications and victim-intake materials.

Service response levels

Critical triage and preservation target within one business day of complete information.

Urgent Ministry notification within four business hours after critical validation.

High-priority submission target within one business day after evidence, authority and approval are complete.

Standard validated incident update within two business days.

Up to two follow-up attempts for unresolved eligible submissions.

DCS delivery roles

Engagement Lead: governance, prioritization and executive reporting.

Digital Investigation and OSINT Analyst: discovery, validation and mapping.

Evidence and Platform Enforcement Lead: evidence, submissions and escalation.

Communications and Public-Protection Adviser: advisory, FAQ and victim-intake materials.

Methodology and key deliverables

Discover Create the baseline asset and indicator set; run name, image, video-frame, username, telephone-number and programme searches.	Validate Separate legitimate reporting and commentary from deceptive impersonation, unauthorized commercial use and scams.	Preserve Record sources, dates, URLs, accounts, content, engagement, representations and relevant relationships.
Disrupt Use applicable platform reporting and rights-enforcement routes; document submissions and outcomes.	Protect Publish official guidance, centralize victim reports and strengthen recognition of genuine channels.	Report Provide an executive account of findings, actions, outcomes, residual risks and next steps.

Core client deliverables

- Official digital-asset, identity, authority and rights-ownership baseline.
- Cross-platform findings, validated account list and controlled incident register.
- Evidence files and relationship map for profiles, posts, numbers and indicators.
- Submission, response, escalation and outcome-verification tracker.
- Public warning, verified-channel notice, red flags, FAQ and victim-reporting package.
- Referral-ready chronology and evidence index where supported.
- Final report, executive briefing, residual-risk register and monitoring roadmap.
- Results dashboard, twice-weekly status updates and service-level performance record.

Results dashboard: The closing dashboard will distinguish activity from outcomes - candidates reviewed, validated incidents, evidence files, complaints, platform responses, removals or restrictions observed, follow-ups, referrals, unresolved items and next actions.

Client responsibilities and important limitations

MLSS will provide or confirm

Official social-media accounts and public contact channels.

Source copies or ownership information for photographs, videos and programme materials.

Written authority for DCS to communicate with platforms.

Known victim reports, screenshots, links, payment requests, numbers and correspondence.

Communications, legal and law-enforcement contacts.

Time-sensitive reviews and approvals within one business day where possible.

DCS operating boundaries

Use lawful, publicly available and client-authorized methods.

Do not compel platforms, telecom providers, banks or messaging services to disclose private records.

Do not identify an operator solely from a public telephone number.

Do not conduct a criminal investigation, prosecute an offender or recover victim funds.

Do not guarantee platform removal because platforms control enforcement decisions.

Delivery dependency: DCS timelines pause when required information, authority or approval is outstanding. Third-party outcomes are not DCS-controlled acceptance criteria.

Deliverable acceptance and change control

- A deliverable is complete when it materially contains the specified content and is submitted in an agreed editable or readable format.
- The Ministry will provide one consolidated review within three business days; one reasonable correction round is included.
- Removal, disclosure, operator identification, arrest, prosecution or recovery of funds is not an acceptance condition.
- Volumes above the included capacity, additional platforms, legal notices, litigation support, travel or work beyond 30 days require a written change order.

Fixed investment for the 30-day engagement

J\$2,600,000

TOTAL INVESTMENT INCLUDING 15% GCT
60% mobilisation | 40% completion

Service	Price excl. GCT
Incident mobilisation and authority mapping	J\$225,000.00
Cross-platform impersonation and image-misuse discovery scan	J\$610,000.00
Evidence preservation, incident register and campaign mapping	J\$380,000.00
Platform reporting, takedown support and escalation	J\$505,000.00
Public-protection communications and victim-reporting system	J\$235,000.00
Referral support, final reporting and transition monitoring	J\$305,869.57
Subtotal	J\$2,260,869.57
GCT at 15%	J\$339,130.43
TOTAL INVESTMENT	J\$2,600,000.00

Mobilisation payment

J\$1,560,000 including GCT
Payable upon acceptance.

Completion payment

J\$1,040,000 including GCT
Payable upon DCS-controlled close-out deliverables.

The engagement begins after receipt of the mobilisation payment, written authority and initial incident materials. The proposal is valid for 30 days from 26 August 2026.

Optional services and acceptance

Trademark feasibility and filing coordination

J\$175,000 + GCT

Preliminary protection brief, ownership coordination, clearance and class-selection support. Attorney and official fees are excluded.

Standard ongoing monitoring

J\$325,000 + GCT / month

Scheduled scans, validation, register maintenance, up to five actions and one monthly report.

Enhanced priority response

J\$500,000 + GCT / month

More frequent scans, priority triage, up to twelve actions, replacement checks and two briefings.

Acceptance and next steps

Required next steps

1. Confirm the Ministry's focal point and reporting authority.
2. Approve the commercial proposal and execute the engagement documentation.
3. Provide known incident materials and the official-asset baseline.
4. Commence mobilisation upon receipt of payment and authorizations.

RECOMMENDED DECISION

Authorize the 30-day containment and response programme.

This intervention protects the public now while strengthening the Ministry's capacity to manage recurrence.
